v1.0

Scoundrel+

Scoundrel+ 100 Additions is an extensive fanmade expansion for the solo roguelike Scoundrel.

If you've played Scoundrel before, then you know the base rules of the game.

As the name implies, this expansion adds a hundred new things to the game.

You might ask "So what are these 100 things?"

Well...

- 12 Classes, each with their own perk and ability.
- 30 special Scoundrel Cards, mostly items or buffs.
- 30 Monster Types (or as I like to call them, Enemy Variations)
- 5 Spells which are risk/reward abilities, you can only use one Spell type per run.
- 2 entirely new modes: Adventure & Endless.
- 2 new Combat Styles which make the game harder/easier
- 2 new Potion Styles to make healing more easy.
- 8 bosses which are unique, strong and deadly enemies.
- 3 prebuilt decks so you can easily start playing Scoundrel+
- 6 NPCs which are allies you can encounter in your run. most NPCs are an improved version of an Event/Buff card and were the final things to be made for this expansion.

Introduction + How To Play

After more than 6 (regrettably long) months, the full version of the Scoundrel+ rulebook is now in your hands.

This version is named "Scoundrel+ 100 Additions" because, well, that's what it is.

The solo roguelike game played with a deck of cards, now with 100 new things added.

These range from classes, new items, playstyles, bosses and even two entirely new game modes.

Back to the game itself, you might be wondering how exactly is the game playable with a 54 deck card when it has 100 new things.

It's because Scoundrel+ is modular.

It's simply a very big list of things you can add to expand Scoundrel.

Someone might simply be interested in the classes while someone also wants the scoundrel card and enemy variations.

I'm assuming you know the rules of the original Scoundrel, if not, you can find a tutorial for it on YouTube or find the official rulebook on google by searching "scoundrel pdf" and downloading the very light 43 KB pdf file.

How to Play Scoundrel+

There's not a "standard way" to play Scoundrel+, this is because as i said, Scoundrel+ is designed to be a modular expansion to Scoundrel that you can use to make the game more fun.

But here's how you craft your own decklist:

1. You choose the mode. (Classic, Alternate or Endless)
2. You choose the combat and potion styles.
3. You choose a spell (it's recommended to at least use one)
4. You choose your class (if you want one, it'll make the game easier).
5. You choose the scoundrel cards and NPCs you want to include. (and add cards to the deck based on the scoundrel cards you chose)
6. You choose the enemy variations you want include.
7. You select the bosses you want to include (if you want a more challenging experience. if you want to add an NPC then also add a boss, and vice versa.)
8. You start the run based on the game mode's rules.

Here's an example:

1. Classic Mode
2. Classic Potion Style, Rage Combat Style
3. Knight Class
4. Merchant (Class Items use red ace cards instead), Blacksmith, Quick Shield
5. Weakening 7s, Weapon Breaker 10s, Poisonous 3s
6. Start the run.

Scoundrel+ is basically just a list of variable rules, so if you don't like a part of a class's ability or think one of the house rules should be different, change it and play it the way you want to.

Scoundrel Cards

Scoundrel+ adds many new cards to the game (technically it adds new functions to existing playing cards, but whatever.)

To simplify things, we are gonna call the in-game cards scoundrel cards and the playing cards (e.g. Joker) deck cards.

scoundrel cards can be categorized into five main categories:

- Events
- Items

- Room Items
- Trigger Items
- Buffs

Events like Blackhole can be activated (each having their own activation method) or if they're not activated, they can be discarded and you'll be able to move on to the next room.

Note: all Events must be discarded in order for you to move on to the next room.

Items like Converter are added to your Inventory and can be used at any point (if an enemy/boss doesn't lock them out)

Room Items like Gravedigger and Recovery can only be used in the current room they're in and cannot be added to the Inventory to be used later, unless the game mode or the challenge specifically allows this.

By technicality, Potions and Weapons are classified as Room Items.

Trigger Items like Quick Shield are added to your Inventory but can only be activated once their conditions are met.

(in the case of Quick Shield it quickly activates the next time you take damage)

Buffs like Raise Max HP are added to your Inventory and are passively active.

Buffs don't count as Items and are still active when a boss/enemy only blocks Items and not Buffs.

IMPORTANT:

All Scoundrel Cards (and NPCs) can be trashed.

Trashing a card will remove its effect and discard it.

You can't trash a card to get rid of its downside, but you can trash it if it's blocking you from progressing to the next room.

Note: Weak Ace, Giant Ace and Adaptive Ace are technically enemy variations therefore they're monsters and not scoundrel cards, but I personally think they fit better in this section.

(You'll see bosses in another section later in this rulebook, they're separate from these three.)

How to Assign Scoundrel Cards?

Before starting a run, you must assign the cards you want to add to the deck's cards. (Write them on paper or a note app so you don't forget them)

Each Scoundrel Card's name has 3 parts:

- the name itself
- the card's type
- the deck card it's recommended to be assigned to.

For example:

Merchant - Room Item (JO), it means the card's name is Merchant, it's a Room Item and it's recommended to be assigned to the Joker card before starting the run.

Note: you can assign any scoundrel card to any deck, but you can't assign two scoundrel cards into one deck card in a single round.

That means if you want to for example use both Merchant and Gravedigger, you must assign one of them to another deck card.

For example: Gravedigger will be Joker and Merchant will become Ace of Diamonds.

Here's the list of abbreviations:

Joker: JO

King: K

Queen: Q

Jack: JA

Ace: A

Spade: S

Heart: H

Club: C

Diamond: D

Red: R

Black: B

F: Face card (King & Queen and Knight)

for example: AH means ace of hearts and HA means heart ace.

(the two are worded differently but have the same meaning)

The Actual Cards

Base Scoundrel+ Cards: (20)

1. Merchant - Room Item (JO)

Discard your weapon and gain HP equal to that weapon's value.

Alternative: Merchant is an Item

2. Blackhole - Event (JO):

If you choose to run away, the next time you encounter this card the entire room is instantly discarded and you must draw 4 cards and create a new room.

3. Gravedigger - Room Item (JO):

Select a discarded card, discard the joker and put that card in the joker's place.

4. Recovery - Room Item (AH):

A potion that fully restores your HP.

5. Second Chance - Trigger Item (AH):

If an attack would cause you to die, that monster is discarded alongside this card and your HP will be set to 5 and all the potions in the room will be activated/used to restore your HP.

6. Converter - Item (AH):

Convert a monster in the room to a potion of equal value.

7. Bomb - Event (AD):

If this card is in the room, you may choose to detonate it and discard three cards in the room, including the bomb itself.

You can't detonate the bomb in a turn where you interacted with another card.

8. Claymore - Room Item (AD):

A weapon with the value of 14.

9. Sharpen - Item (AD):

Your weapon will deal +1 damage and all monsters attached to it will be ignored.

Sharpness carries over to your next weapon, but only once.

10. Weak Ace - Monster (BA):

The value of aces is 1 instead of 14.

11. Giant Ace - Monster (BA):

The ace's value is 20.

12. Adaptive Ace - Monster (BA):

Aces' value is $3+n$, with n being your weapon's value, plus any boosts it has (e.g. Berserker's perk).

When attached to your weapon, it will remove all the boosts it has and decrease its durability by 3.

13. Raise Max HP - Buff (HF)

If you have one heart face card, your max HP is raised by 1, if you have 2 it's raised by 3 and if you have all 3 it's raised by 5.

(You can decrease or increase this amount depending on how easier you want the run to be)

14. Royal Block: Equal - Item (HF)

Jack: If there's a black Jack in the room, discard both that card and this card.

Queen: If there's a black Queen in the room, discard both that card and this card.

King: If there's a black King in the room, discard both that card and this card.

15. Royal Block: Lower - Item (HF):

Discard a Jack/Queen/King of Heart along with a monster that has lower value than it.

16. Quick Shield - Trigger Item (HF):

When you draw a heart face card, put it next to your weapon.

The next time you'd take damage, discard the heart face card instead.

17. Smoke Bomb - Trigger Item (HF):

If you have to fight a monster barehanded, you can discard Smoke Bomb along with that monster.

18. Blacksmith - Item (DF):

Jack: discard the lowest monster attached to your weapon.

Queen: discard the lowest two monsters attached to your weapon.

King: discard all the monsters attached to your weapon.

Alternative: Blacksmith becomes a Room Item.

19. Weapon Boost - Item (DF):

Jack: attach this to your weapon, ignore all the monsters attached to this weapon while attacking. The weapon deals +1 damage.

Queen: attach this to your weapon, ignore all the monsters attached to this weapon while attacking. The weapon deals +2 damage.

King: attach this to your weapon, ignore all the monsters attached to this weapon while attacking. The weapon deals +3 damage.

Note:

Boosted Weapons have a downside and MUST be swapped with the next weapon you encounter.

They can't be stacked together.

20. Lifesteal - Item (DF):

Attach this to a weapon.

For this room, that weapon heals the player by the value of any monster it attacks; however it doesn't work on monsters with higher value than your weapon. Discard Lifesteal after you enter the next room.

21. Emergency Exit - Item (JO)

Put all cards in the room (aside from one) back on the bottom of the deck.

(This naturally initiates the next room)

22. Trick - Item (DA)

Swap the value of two valued/numbered cards in the room.

23. Health Trick - Item (HA)

Swap your HP with the value of a monster in the room.

24. Natural Selection - Item (DF)

Select two monsters in the room, the one with the lower value is discarded and the other one gets a +2 value increase.

25. Gambit - Buff (JO)

When you decide to attack a monster, you can flip a coin instead of fighting normally:

If it's heads, that monster gets discarded.

If it's tails, then Gambit and your weapon will be discarded instead.

26. Binding Chains - Item (DF)

Remove the enemy variation effect of a monster in the room, except bosses and the Reaper. Binding Chains are not affected by effects that disable items, such as Thief.

27. Enemy Replacer - Item (DA)

Select two enemies in the room, and transform one of them to the other one.

28. Retrieval - Trigger Item (JO)

If you use a class item, discard Retrieval instead of the class item.

(The item can be used once again)

29. Regeneration - Buff (HA)

When you start a new room (except by running away), recover 3 HP.

30. Echo - (HA):

This card becomes the last card you activated during this run.

Combat Styles

These are basically different approaches to the game's combat.

Classic Mode is based on the original 2012 rules of Scoundrel, Rage Mode is a more fun but harder variant (and some cards like Giant Aces are definitely not recommended for this combat style) and Simple Mode is just an easy mode.

1. Classic Mode:

You can fight barehanded or use your weapon.

If you decide to fight barehanded, subtract the monster's value from your HP.

If you decide to use your weapon, subtract the weapon's value from the monster's value, then subtract the remaining amount from your HP and attach that monster to your weapon. You can only use your weapon on monsters whose value is lower than the lowest monster currently attached to your weapon. Meaning if it's equal or higher, you must fight it with bare hands.

This is the combat style used in the original version of the game.

2. Rage Mode:

You can only use your weapons on monsters with equal or lower value than your weapon.

If the monster's value is higher than your weapon, you must fight it barehanded.

Monsters don't get attached to your weapon in this mode unless their effect forces it.

This is a risk/reward system.

Monsters don't get attached to your weapon at all, but in exchange you can't use your weapon on a monster that has higher value than it.

3. Simple Mode:

You can fight any monster with your weapon, monsters don't get attached to it.

This is basically just easy mode.

Potion Styles:

These are different ways to use the potions, basically different approaches to healing.

1. Classic Mode:

You can only use one potion per room, any other potion you try to use is simply discarded instead.

2. Easier Mode:

After your first potion in the room, the effectiveness of the other potions in the room is halved, rounded down.

(e.g. 6 -> 3 / 7 -> 3)

3. Alchemist:

You can transform a potion to a Super Potion. A Super Potion is 1.5x (rounded down if decimal) times more effective than a normal potion, but it lowers the value of the next potion you draw to 0.

Classes (Rework)

Introduction

Scoundrel+ adds 12 classes to the game, each one having the following:

- a Perk that is either passively active or doesn't require anything to activate.
- a Class Item that is the class's stronger ability.
- an Optional Limit that you can use, they're downsides that add some challenge to the class.

The Class Item can be set to two ways:

1. Requires a deck card to activate.
2. Has one charge/use at the start and can get an extra use by using a deck card.

The recommended deck card for the Class Items is Joker.

(meaning if you wanna use something like Blackhole, you must assign it to another card)

Class 1: Knight

Perk: take 1 less damage from anything.

Class Item: revert all the damage taken at this room OR the previous room.

Optional Limit:

Can't run away unless staying in the room would guarantee a death.

(If there's even one way you can survive the room, you can't run away from it)

Class 2: Scout

Perk: you can run away two times in a row, but running three times in a row will halve your health (rounded down).

Class Item: Place any card(s) in the room back on top or bottom of the deck, then add a up to 3 cards from top of the deck to the room.

Optional Limit: The perk can only be used 3 times. (or 2 for added challenge)

Class 3: Necromancer

Perk: discard the lowest monster card attached to your weapon after entering the next room.

Class Item: Instantly kill a monster, discard it and put a monster attached to your weapon in its place.

Optional Limit:

the class item can only be used if there is a monster attached to your weapon.

Class 4: Mage

Perk: you can use two potions at once. Potions you don't use can be added to your pouch instead of being discarded (maximum of 3 potions in your pouch).

Class Item: use up to two potions that are stored in your pouch.

Optional Limit:

If you have 2 or more potions in your pouch, you cannot run away.

Class 5: Ranger

Perk: When switching weapons, you can store two of the monsters attached to your previous weapon inside your Quiver. (maximum of 10)

Class Item: Discard cards in your Quiver and destroy any monster with n or lower value. $n =$ the amount of Quiver cards discarded $\times 1.5$ (then rounded down)

You can discard all other cards in your Quiver and put the Class Item back on top of your deck.

Optional Limit:

Quiver can't be retrieved and it has a maximum capacity of 8.

Class 6: Berserker

Perk: deal +1 damage when HP is 15 or lower, deal+2 damage when HP is 10 or lower, deal +3 damage when HP is 5 or lower. Can only run once per three rooms.

Class Item: Set your HP to 10 or 5.

Optional Limit:

Takes +1 damage from anything.

Class 7: Explorer

Explorer is used instead of Scout in Alternate mode due to the differences between game modes.

Perk: once per floor, you can change the location of 2 cards.

Class Item: reveal all the cards on the floor, change the order of any of them.

Optional Limit:

The perk will only allow you to change the location of one card.

Class 8: Blood Mage

Perk: Beating any monster with $10 \leq$ value adds 2 HP to your Vial Reserve.

Class Item: transform a card into a potion of equal value then increase it by your Vial Reserve.

Optional Limit:

Vial Reserve can only be increased by beating face cards. (King, Queen, Jack)

Class 9: Trickster

Perk: Before you interact with any of the cards in the room, you may choose to swap any one of the cards with the top card of the deck.

Class Item: discard the top card of the deck, and if it was a monster destroy any active card with higher value than it.

Optional Limit:

You can't use Trickster's class item the turn you use its perk.

Class 10: Pirate

Perk: Pirate can put an additional weapon in its hand as Dual Wield weapon.

Dual Wield weapons doesn't attach defeated monsters to themselves, but can only be used for 2 rooms of your choice and are discarded afterwards.

Class Item: Turn a monster into a weapon with equal value, then turn an Item into a monster with equal value.

Optional Limit:

Dual Wield weapons can only be used once.

Class 11: Scavenger

Perk: Monsters deal -2 damage if fought barehanded. Can't be used two rooms in a row unless not using it would guarantee your death.

Class Item: Draw 2 cards, regardless of what they are, turn them into the Emergency Exit item.

Optional Limit:

The perk only works for the first monster/enemy you battle in the room.

Class 12: Prisoner

Perk: after you beat an enemy with 10+ value, choose six classes and assign a number to each of them (1-6) then roll a dice two times to get two classes. Select one of them to change Prisoner's perk to, and the other class changes its class item.

Class Item: shuffle this card back to the deck and activate Prisoner's perk.

Optional Limit:

You will get the Optional Limits of the classes Prisoner inherits.

Enemy Variations

Enemy Variations/Monster Types are effects you can assign to Clubs/Spades cards (monsters) to make them stronger.

If you want to use classes or scoundrel cards, then balance them out by adding some effects to the monsters. (for example, making the 2s poisonous and the 6s weapon breakers)

The 30 Enemy Variations Are:

1. Reaper:

There can only be one reaper per deck.

You can't run away if there's a reaper in the room, no card/spell/effect can affect it while it's in the room. The reaper is safely discarded if it stays after two room changes.

if for any reason you attack the reaper, you instantly lose the run.

If you use a Spell or card that targets multiple cards, Reaper is unaffected.

The only alternative way to beat the reaper is with cards that affect it while it's still in the deck.

- Trivia: this is the one I'm the most proud of.
The reaper was originally number 5 (and number 1 was Poisonous) but i decided to change it.

2. Weapon Breaker:

After attacking this monster, your weapon and all monsters attached to it are discarded.

3. Weakening:

Instead of taking damage, your max HP amount is lowered by the same amount of damage you'd take from this monster.

4. Guard:

If there's a Guard, you have to attack it before doing anything else in the room.
If there are multiple Guards in a room, all of them have to be attacked.

5. Poisonous:

As long as this monster is attached to your weapon, at the start of each room take damage equal to the monster's value.

6. Bound:

When you attack a Bound card, discard one of the cards next to it alongside it.

7. Inverted:

If this card has a lower value than your weapon, you take damage equal to the value difference after attacking it.

8. Tough:

Tough monsters can only be fought barehanded.

9. Weaponized:

If there are any weapons adjacent to this card, you can't interact with those weapons until you beat this monster and their value is added to this card's value.

10. Stalker:

Stalker monsters stay in the room even if you run away and draw a new room.
(They're added to the room, if there's one stalker the room will have five cards, if there are two stalkers then 6 and so on)

11. Mirage:

You can place this card at the bottom of the deck then draw another card and replace Mirage with it.

12. Thief:

You can't use Items while a thief is in the room. You must discard one of your Items after you attack the Thief.

13. Vampire:

If Vampire's value is higher than your HP, you instantly lose the run.

14. Spiky:

Spiky monsters deal 3 extra damage if fought barehanded.

15. Cursed:

If you fight a Cursed monster barehanded and don't heal yourself in this/the next room, you instantly lose the run.

16. Summoner:

After this card is attacked, reveal the top card of the deck. If it's a monster, put it in Summoner's place in the room, and if it's not a monster then discard it.

17. Hidden:

Hidden Monsters can't be attacked in the turn they're added to the room.
(This means they either must be carried over to the next room, or you escape/run away)

18. Magician:

Magician monsters will put the highest number monster attached to your weapon in their place after they get attacked.

19. Enforcer:

When an Enforcer is in the room, none of your class perks and abilities can be used, and upon defeating an Enforcer you must discard a class item if you have one.

20. Corrosive:

After attacking an Corrosive monster, the next monster you fight can only be fought barehanded. Class features can't be used until you do so.

21. Mimic:

Mimic's value is equal to your weapon's original value, and it must be fought barehanded.

22. Parasite:

When Parasite is encountered (added to the room), it's instantly attached to your weapon. Your weapon can't be swapped if Parasite is the top card attached to it.
(Note: if you can't use a weapon in the room, you can still discard it.)

23. Shielded:

Shielded monsters can only be attacked if at least two monsters are attached to your weapon.

24. Amplifier:

When amplifier is the top card attached to your weapon, the next monster you battle has its original value doubled.
(e.g.: a queen is doubled from 12 to 24, and then other stat changes are applied).

25. Refresher:

Attacking Refresher discards all cards attached to your weapon.
(I'm pretty sure this is the only one that benefits the player)

26. Enhancer:

Enhancer's value is added to the nearest monster (if there are two adjacent monsters, the one with higher value and if it's a tie, just pick whichever you want.) Enhancer itself doesn't deal any damage regardless of its value.

27. Vengeful:

After a Vengeful monster is attacked, put it in the bottom of the deck facing up. The second time it's attacked, discard it.

28. Resistant:

Resistant monsters are unaffected by normal items and trigger items.

29. Radioactive:

You can't heal yourself as long as there's a Radioactive monster in the room.

30. Binding:

You cannot run away / escape if there's a Binding monster in the room.

Bosses

In Scoundrel+, there are 8 Bosses which are stronger enemies that have multiple effects. Each boss is a Clubs/Spades Face or Ace card.

Ace of Spades: Death.

- Reaper + Thief + Enforcer

When this card enters the room, you must survive three rooms while not attacking it.

The challenging part about Death is that when it's in the room, you cannot use any items or your class's abilities. When Death disappears, it also takes away one Item and one Class Item from you.

Ace of Clubs: Wrath.

- Guard + Stalker

Wrath is a natural disaster of a card.

It has Guard so you can't interact with any cards as long as it's active, and it also has Stalker so that it stays in the room even if you try to escape and run away to the next room.

King of Spades: Army.

- Summoner + Magician + Corrosive

Army will replace itself with two cards after being defeated, one of them being the highest monster attached to your weapon and the other being the top card of the deck (if it's a monster).

And don't think that it'll be easy to beat them with a weapon, Army has Corrosive meaning the monster you fight after Army must be fought barehanded.

For added challenge, you can add Weapon Breaker to the boss as well.

King of Clubs: Plague

- Weapon Breaker + Thief + Binding

Plague is like a sickness, it leaves you weak and vulnerable.

You can't escape it, you can't save your weapon from it and you can't use items unless you beat it.

the 4 other bosses will be added in the v1.1 patch, sorry they're not in this one.

NPCs

As stated in the introduction, these were the final additions in Scoundrel+ 100 Additions.

NPCs are cards you encounter that can help you throughout your run.

Each NPC has a powerful effect and an even stronger Optional effect as well.

You can assign the NPCs to any card of your choice as long as it doesn't overlap and there's only one (or two, depending on the deck's difficulty) NPCs in the deck.

NPCs are basically stronger versions of Room Items/Events and it's recommended to use them alongside the bosses.

1. Merchant (NPC)

When you encounter Merchant, shuffle the discard pile and draw 4 cards. Pick one of them to replace the Merchant in the room and discard Merchant alongside the rest of them.

Optionally:

You can offer your weapon to draw 6 cards instead and replace your weapon with any weapon you find in those cards. If they were no weapons the Merchant will heal you by the value of the weapon you offered.

This is the upgraded version of the Merchant event card.

2. Priest (NPC)

When you encounter Priest, all weapons and potions in the room transform to Special Potions.

Special Potions do not have the "once per turn" limit regular Potions have. Discard Priest after consuming a Special Potion.

Optionally:

When Priest is in the room, any damage that would kill you will set your HP to 1 instead.

If you use this effect, Priest becomes a normal potion with a value of 1 in the next room.

3. Blacksmith (NPC)

When you encounter Blacksmith, all enemies/monsters attached to your weapon get discarded and as long as Blacksmith is in the room no enemy gets attached to your weapon. Blacksmith must be discarded if it stays in for more than two turns.

Optionally:

When Blacksmith is discarded, your current weapon gets +1 value.

This is the upgraded version of the normal Blacksmith.

4. Mercenary (NPC)

When you encounter Mercenary, you can discard it to gain his favor.

Mercenary's favor allows you to lower the value of one monster, by any amount.

The only limit of this ability is that it can only be used once.

Optionally:

After you draw Mercenary, all monsters in the room get discarded.

5. Wizard (NPC)

When you encounter Wizard, you can swap the value of two cards in the room and then discard the other two cards (one of them being Wizard), Wizard loses its effect if you interact

with another card in the room.

Optionally:

You can discard Wizard to double the value of one card in the room as long as it has a value of 7 or lower, otherwise it's just trashed.

6. Traveler (NPC)

When you encounter Traveler, you can take a look at the top 6 cards on the deck and change their order. Traveler must be discarded before you move to the next turn.

Optionally:

You look and change the order of the top 9 cards instead.

Spells

Spells are mechanics that don't require a specific card to activate and are not bound to any classes.

Each Spell has it's own risk/reward ability, making good timing a key thing when using them. It's recommended to only use one or two spell types each run.

Quick Draw:

Once per room, if at least one card in the room has been interacted with:

Discard your current weapon and look at the top card of the deck, if it's a weapon you may choose to pick it up and replace your current weapon with it.

If it's a potion, use it instantly.

If it's a monster, add it to the room.

And if it's anything else, put it back on top of the deck.

You can only use Quick Draw 3 times during each game.

Weapon Redraw:

(Alternative for Quick Draw)

Once per room, discard your weapon to look at the top card of the deck.

If it's a weapon, equip it. and if it's anything else, put it at the bottom of the deck.

Blood Pact:

If you've used escape in the previous turn, pay 3 HP to use escape again.

Blood Pact's price increases by 2 after each use.

Sacrifice:

Discard your weapon along with all the monsters in the room.

You can only use Sacrifice once per game.

Ritual:

Discard any amount of cards in the room, set your HP to one at the start of the next room. Ritual can only be used once per game.

Adventure Mode

Adventure Mode is a new game mode introduced in Scoundrel+

Rules that are not stated/specified are unchanged from classic Scoundrel.

Instead of 4 card rooms, adventure mode has Floors which consist of 10 cards. (Each adventure mode run has 4/5 floors)

Adventure Mode Setup:

Draw 4 cards, add up to 2 scoundrel cards from them to your Inventory and place the rest face up, put cards in the room face up until there's 4, then put 6 cards face down next to them; they're the floor's second and third room.

Once there's only one face up card, reveal the next three faceup cards and build a new room. Each floor consists of 3 rooms and will end once there's only one card left, that card becomes the floor's Loot.

If the Loot card is a monster card, it's discarded and if it's a Scoundrel Card add it to your inventory.

Note: Events cannot be added to Inventory, making them an exception to this rule.

After that, repeat the process of creating the floors, but from now on don't add cards to your Inventory at the start of the floor. (That's only to give you a head start in the first floor since you can't run away from rooms in this mode)

Inventory:

The two first scoundrel cards you draw in this mode are added to your inventory, and when you finish a floor the last card is also added if It's not a monster or event. Cards in the inventory can be used at any point during the run unless an enemy prevents them from being used.

Notes:

- There's no running away in Adventure Mode, this being the reason Explorer replaces Scout in this mode.
- the final floor will usually always have less cards than the previous floors, but you can make it more interesting: if the card number is the deck is less than 10, add all of them to

the current floor, and when the third room starts; reveal all of the cards, think of it as a final boss fight.

- You can increase the difficulty by limiting your Inventory's space or adding the rule that in the 2nd and 3rd floors, if you don't use a loot, you must discard one from your inventory after you finish the floor.
 - If any part o
-

Endless Mode

Endless Mode is one of the two new modes introduced in Scoundrel+, this mode's original concept was made by bluebob166, and the reworked version used in this rulebook is made by me.

Introduction

In this mode, whenever you finish a round/run, you instantly start a new one.

Each new run will have more modifiers than the previous one, making it harder to beat. If you want a new experience and Adventure Mode isn't challenging enough, give this one a try!

Preparation

You'll need a deck of cards, and two d6/normal dice.

First, you select these from the options listed in the rulebook and write them somewhere so you can track them (a paper, a notes app, etc.)

- 12 Scoundrel Cards
- 12 Enemy Variations
- 6 Spells (since there's only 5 in this rulebook, rolling a 6 will let you choose which spell)
- 6 Classes

Assign a number from 1 to 12 to the scoundrel cards and enemy variations, and 1 to 6 to the classes and spells.

Each run, a new scoundrel card and enemy variation will be added to the deck, and your class and the spell you can use is changed.

Before the first run, the deck is a standard scoundrel deck. (no red aces, red faces and jokers) but in each run, it gets expanded.

Endless Modifiers

In the first run, the n1 of each of the 4 modifiers (scoundrel cards, enemy variations, etc.) is chosen. This helps you have a higher chance of winning your first run since you choose the

modifiers.

When you beat the first run is when things start to get interesting.

- roll 2d6 to select a new card to be added.
- roll 2d6 to select a new enemy to be added.
- roll 1d6 to change your spell.
- roll 1d6 to change your class.

If a scoundrel card you got uses the same poker card as another scoundrel card active, the new one will replace the previous one.

(for example if you have Merchant but you get Blackhole, it will replace Merchant since they both use the Joker card, unless you specifically differentiated them in your decklist.)

If you roll a number that was active in your previous run, it remains unchanged/untouched in the next run. (for example, you roll 1 twice and your spell will not change)

Scoring:

Your score will be $n + \{A/B\}$

- n is the number of the run you lost.
- A is the number of remaining cards in the deck.
- B is the number of cards in the deck at the start of that run.

For example, if you lose in the fourth run and 12 out of 50 cards were remaining, it'd be:
 $4 + 12/50$

Note:

This mode was made before i added Bosses and NPCs, and because of that, they weren't mentioned here.

If you wanna use them, add them as options in the scoundrel cards and enemies lists respectively.

Decklists

These are a few decklists to help you get inspired and create your own.

Classic Scoundrel+

Classes:

- None allowed.
- Scoundrel Cards:
- Merchant (JO)

- Blacksmith (DF)
- Quick Shield (HF)
- Claymore (DA)
- Recovery (HA)

Enemy Variations:

- Add based on your preferences.

Spells:

- Quick Draw
- Ritual.

This decklist is an enhanced version of Scoundrel, mainly using simple yet useful ideas from other users, and the Claymore and Recovery for a bit of extra reward.

It's a Scoundrel Card focused decklist, and no classes are allowed in it.

There's not a recommended set of enemy variations for this one, so use 3 or 4 that you like if you want to make it challenging.

Death's Deck

Classes:

- All allowed except Trickster, Scavenger and Pirate.

Scoundrel Cards:

- None. (play with base scoundrel deck cards)

Enemy Variations:

- Add based on your preferences.

Bosses:

- Death.

NPCs:

- Any allowed except Traveler, only put one NPC. No NPCs if you use a class.

Spells:

- Quick Draw

This variant uses my favorite boss in the game, Death.

It has no scoundrel cards in it, and therefore it's harder than an average Scoundrel+ run.

Usually the weakness of Death/Reaper is effects that affect it while it's still in the deck, but those effects are not allowed in this decklist so that it becomes more challenging and the only way to defeat it is for Death to still be in the room after two room changes.

(Will be added in v1.1)

Sorry, like the latter 4 bosses, this will also be in the v1.1

Other Notes

Hello there again.

Thank you for reading the Scoundrel+ rulebook.

I want to use this few last parts as a sort of behind-the-scenes and talk a bit about the game.

What Led To It?

I watched the video by Riffle Shuffle & Roll and instantly liked the game. (shoutout to him, go play his game Collapsi, it's another game you can play with a deck of cards)

It was so simple, a solo roguelike played with a deck of cards; but it felt like it could've been better.

There wasn't much in it, and the red faces, red aces and Jokers weren't even used in it.

I saw some comments giving ideas for new rules like the Merchant, Blacksmith and other stuff, but it still wasn't enough.

I thought about adding RPG elements like classes to it, and after seeing a few people on Reddit having the same idea, I decided to work on an "enhanced" version of Scoundrel with a lot of new house rules and stuff, and the result became Scoundrel+

Did I design everything in this rulebook?

Most ideas in Scoundrel+ were by me, but some were by other people. Here's the list:

(the usernames with @ are YouTube commenters and the ones with u/ are Reddit users)

- @romanallgeier4661: Blacksmith card
- @4TheWizard: Merchant card
- @serbianweatherman2385: Raise max HP card
- u/TrickyMaize2214: Berserker class idea
- u/Poltergas: Necromancer class idea
- Card Crawl (game): Blood Pact, Value Swap, HP Swap
- u/bluebob166: Endless mode idea.

If you think i used your idea but didn't credit you, message me on Reddit (u/ImAmirx)

So... What's Next

Well, now that you've seen all the stuff the 100 Additions has to offer, you might (hopefully) be wondering what's next for Scoundrel+ and my next projects.

1. Scoundrel+ will have more releases after this.

First, there will be the v1.1 which will add the bosses i couldn't finish for v1.0.

(I could've just mixed 3 enemy variations for each one, but i want them to be special)

And after that there will be mini expansions.

The mini expansions will be released in two forms, both as updates to this rulebook and as

separate mini rulebooks. (both options will be fully free)

2. My next major project will be a series of dice games released with the "DICE:" name.
Here's a brief teaser for the first two.

- DICE: Defuse

A solo dice game about defusing bombs, the interesting part about this game is the fact that you can play with any amount of dice and the entire game can be learned in under a minute.

- DICE: Devil

A series of boss fights you battle using your dice. each boss cheats and rigs the game in their favor.

The game is solo and will have a good variety of bosses for you to challenge.

3. I'm also working on my own original card game: Solstone.

Solstone is a LCG (Living Card Game) with two twists:

- Decks will only have 9 or 18 cards depending on the gamemode.
- Each of the 6 factions (or as they're called in Solstone, Alignments) have a different secondary card type. For example the fire alignment Igni has Banners that can be stacked on top of eachother, and the earth alignment Terra has Runes that stay on the field even if they're destroyed.

You can expect DICE: Defuse and the preview for DICE: Devil in late 2025. and the full release of DICE:Devil and (hopefully) Solstone in 2026.

And yes, like Scoundrel+, these will all be free to play.
